Subject: [EXTERNAL] Nanushuk Development Project

Having looked over the project EIS, I find that it to be a very comprehensive document. With that said, I lived and worked on the North Slope for over 35 years and the change in the how we develop resources now compared to 30 years ago is one that really looks out for the environment and the local residents. I believe that Armstrong Group has adopted that culture. The EIS shows that they are aware and are willing to move the program forward using those guide elements stated in the EIS. Armstrong has demonstrated that they can do the work safely and with environment concern as their guiding principles they would be good stewards of the land. I think the state of Alaska and the people of Alaska need the jobs and the revenue that this work will provide, both are long term benefits from the project. Having a company that is willing to move forward with a project in times of low oil prices is extremely important. All other major companies have put their head in the sand and are doing nothing. This alone shows that the company is willing to go the extra mile.. I see nothing in the long term or short term that has negative effects that cannot be worked around..
